

# Abiodun Abudu

Software Engineer in Lagos, Nigeria (GMT +1)

Primary: [abiodun.abudu@andela.com](mailto:abiodun.abudu@andela.com) Personal: [sulaimanabiodun172@gmail.com](mailto:sulaimanabiodun172@gmail.com)

## PROFESSIONAL SUMMARY

Abiodun loves using code and technology to be creative and innovative and to solve real-life problems. With over 3 years of experience in software engineering, he specializes in researching, automating business processes, and building applications with JavaScript, TypeScript, and the PREN stack. His industry experience spans edtech, finance, and eCommerce, and he has also been involved in an open-source project owned by ideo.org, working both on the web application and the bot codebase. As a side activity, Abiodun works as an IT instructor at the Hands-on Institute of Information Technology, conducting IT research and helping beginners to learn the basics of programming.

**Fun fact:** If you had to change your name  
Sulenchy

Completed three cycles (ALC 1.0, 2.0, 3.1).

B.Ed in Computer Science & IT

Grade: Second Class Upper

## TECHNICAL PROJECTS

EduGate

Dec 2019 - May 2020 · 5 mo

EduGate

The idea behind this project centers around providing a result management system to schools, especially high schools, around the globe. It uses React Context API for managing states. Worked in a team of two and built part of the EduGate back end. Asisted incoming members, answered members' technical questions, prepared project specifications, and evaluated member projects in voyage 11. The back end can be found at [github.com/chingu-voyages/v9-bears-team-21](https://github.com/chingu-voyages/v9-bears-team-21). The front end is still ongoing, and its repository is currently private.
